

INTRODUCTION TO ER SAMPLE SCRIPTS AND FORMS

In an emergency, deployment requests may come via email, telephone, or text message if these services are operational. If you think an emergency condition exists in Santa Cruz County, monitor the K6BJ-2m, WR6AOK 2m and WB6ECE- 70cm repeaters. If these repeaters are not operating, monitor and transmit on the **output** frequency of K6BJ-2m repeater (CH 26) or WR6AOK (CH 25). If you hear nothing, you may be the first ham on the air. Start a resource net to find out who else may be available.

A **Resource Net's** purpose is to determine who is available for what time periods, with what equipment. It should be held on a repeater with wide coverage, such as WR6AOK or WB6ECE-70cm. Available resources may be directed to join a tactical net on a different frequency.

Tactical Nets coordinate the use of resources in a particular local area, likely in coordination with public safety and other volunteer groups. Tactical nets may be simplex or on a repeater with coverage limited to the area of interest.
